1 Routine/Function Prologues

1.0.1 LIS_forcing_FTable (Source File: LIS_forcing_FTable.c)

Function table implementation for different forcing options

1.0.2 registerget (Source File: LIS_forcing_FTable.c)

Registers the routines to open and read model forcing

INTERFACE:

```
void FTN(registerget)(int *i,void (*func)())
```

1.0.3 getf (Source File: LIS_forcing_FTable.c)

Delegates the routine to open and read the appropriate model forcing

INTERFACE:

```
void FTN(getf)(int *i)
```

1.0.4 registertimeinterp (Source File: LIS_forcing_FTable.c)

Registers the routines to perform temporal interpolation

INTERFACE:

```
void FTN(registertimeinterp)(int *i,void (*func)())
```

1.0.5 timeinterp (Source File: LIS_forcing_FTable.c)

Delegates the routine to perform temporal interpolation

INTERFACE:

```
void FTN(timeinterp)(int *i)
```

1.0.6 registerdefnat (Source File: LIS_forcing_FTable.c)

Registers functions that define the native domain for model forcing products

INTERFACE:

```
void FTN(registerdefnat)(int *i, void (*func)(float*))
```

1.0.7 defnates (Source File: LIS_forcing_FTable.c)

Delegates the routine to open and read the appropriate model forcing

INTERFACE:

```
void FTN(defnates)(int *i, float *kgds)
```
